

# Stone Bank School

## Presents

# Introduction to Love and Logic

### What is Love and Logic?

Love and Logic is a philosophy of raising children which allows adults to be happier, empowered, and more skilled in their interactions with children. Love and Logic is a way of working with children that puts parents back in control, teaches children to be responsible, and prepares young people to live in the real world, with its many choices and consequences. It offers adults an alternative way to communicate with children. The techniques produce immediate results because they are simple, practical, and easy to learn.

### Topics include

- An introduction to the Love and Logic™ Approach
- How to neutralize arguments
- Setting enforceable limits
- Understanding that mistakes are learning opportunities

**This presentation will teach practical skills that you can start using with your kids right away!**
